Productivity Manager

Productivity Manager is a cloud based staff scheduling solution that lowers labor costs in surgical facilities. Issio's patent pending, data-driven algorithm drives the Productivity Manager's staffing recommendations. The result is ideal staffing, every hour of every day with proven cost savings and significant ROI.

"Issio has given our center a greater understanding of how our pre and post-op areas can be staffed for improved efficiency and cost effectiveness."

"We can really drill down the staffing needs, rather than just looking at the schedule and making a general estimate."

"All staff can be notified of their start times with one click of the mouse."

Data-Driven, Intelligent Technology

Issio's algorithm predicts hourly patient volume and suggests appropriate staffing levels. This technology is a multi-factor, quantitative model developed by Issio MDs, Mathematics PhDs and MBAs.

- Staffing recommendations based on ASPAN* nurse to patient ratios
- Produces accurate, consistent staffing
- Provides benchmarking, business intelligence and customized reporting
- Decreases dangerous understaffing and costly overstaffing

Real ROI, Easy Implementation

- Lowers staff hours per case and makes an immediate impact on payroll
- Gives real time oversight and actionable data
- Issio's enterprise structure provides overtime tracking and control
- Requires no hardware and is completely web-based and easy to learn
- Contains no Protected Health Information (PHI)

Improved Communication and Higher Productivity

- Saves time scheduling staff
- Integrates with your practice management software
- Sends staff schedules and tasks with one-click via text
- Eliminates multiple texts, calls and emails to finalize schedules
