Float Pool

Float Pool is a cloud-based tool that dramatically improves productivity within a region of surgical facilities. It allows administrators to easily see who is available and automatically flex staff between facilities based on case volume and demand, improving efficiency and productivity for the entire region.

Float staff between regional facilities. Now you'll know who is available for any site within your region allowing you to share resources and increase staffing productivity overall.

What is Float Pool?

Float Pool is a tool within Issio's Productivity Suite, a central scheduling and communications hub for surgical facilities. Issio's Productivity Suite saves managers and administrators time and ensures that schedules and assigned tasks are delivered efficiently and reliably to staff members. From Issio's cloud-based platform, managers can plan their day efficiently and cost effectively. With Issio Float Pool, now managers can optimize staff not just within one facility, but a region as a whole.

Benefits

- Float a flexible workforce over a region
- Decrease reliance on agency staff
- Improve utilization of staff
- Allow staff to maximize their hours, keep staff more content

How it Works

With Float Pool, all of the benefits of using Issio Productivity Suite will be at a manager's fingertips

Analyze. Our proprietary algorithm produces accurate, consistent staffing by predicting hourly patient volume and suggesting appropriate staffing levels.

Communicate. Issio brings consistency and reliability to the staffing process with one-click communication, view and confirm capability, and SMS tracking.

Integrate. Issio integrates with existing scheduling and payroll systems to give managers access to real time OT and Staff Hours per case data.

Float. Managers can automatically flex staff over a region of facilities based on case volume and demand for the region.
